Flight safety Policy of "Turkistan International Airport" LLP

Safety management system is one of our main management systems and is designed to continuously improve the level of flight safety at our enterprise by implementing the best international practices and standards in the field of safety, which, in turn, builds confidence and trust among our customers and future partners and lays a vital foundation for our production and business success. We ensure that the safety management system is extended to all our aviation activities.

Management at all levels and all employees are responsible for achieving a high level of flight safety, starting with the General Director.

We make a commitment:

To manage flight safety by allocating all relevant resources.

Ensure the availability of sufficient qualified personnel to implement and comply with the safety policy.

Apply procedures for identifying hazards and managing risks in order to ensure an acceptable level of flight safety at the airport.

Promote an open and transparent safety culture. Introduce a positive culture of voluntary reporting of identified risk factors.

To guarantee the employee who has reported a flight safety problem through the hazard data reporting system protection from taking any measures of influence, except in cases where such a report reasonably indicates illegal actions, gross negligence or intentional or malicious violation of rules or procedures. Cases of gross negligence, intentional actions or omissions of personnel should be considered unacceptable.

Comply with and, if possible, exceed legal and regulatory requirements and standards.

Implement an internal training program for employees of "Turkistan International Airport" LLP and the provider of ground handling services "Kaz Avia Service" LLP on the safety management system.

To guarantee to all personnel of "Turkistan International Airport" LLP the provision of adequate and appropriate flight safety information, appropriate training to ensure the necessary qualifications commensurate with the duties performed.

Conduct a regular assessment of the flight safety effectiveness in comparison with the set realistic goals.

Maintain and continuously improve the airport's safety management system through management processes that ensure the adoption of appropriate and effective measures in the field of flight safety.

To guarantee that the systems and services provided from external sources for ensuring our production operations comply with flight safety standards.

Managing Director   **Nugumanov I.M.**
